

Helitowcart introduces 18 000lbs capacity tow cart at HAI convention:

Again! Helitowcart introduces a new helicopter tow cart to its towing device family.

Less than a year after releasing its impressive V500, the company now offers an optimized model, the V614. This new model was engineered with a desire to beat the V500's success by working on extending traction capability, making the unit more compact in length and height and, by getting close to eliminating turn radius distances. All project targets were met!

It is one of the most polyvalent tow cart on the market: it can tow almost all skidded helicopter models, many wheeled helicopters and most executive planes. One can easily tow an R44, up to a B212, an Agusta 109 or a King Air. The tow cart has a capacity of 18 000lbs (8 200kg). This new towing device is also available in a low version (V610) for accessorized helicopter bellies.

The Helitowcart engineering team is proud of its achievement: impeccable design output exceeding user's requests!

***New on market:
Tow cart turns on itself for minimum radius turns for tight operations***

Helitowcart is a manufacturing enterprise dedicated at providing helicopter ground handling equipment and helicopter flight accessories to significantly improve daily quality of life for pilots, mechanics and managers.
